

New generation ceiling with
integrated cooling and heating system

B+M GP - Cool Speed

- ✓ robot-assisted
pipe laying
- ✓ quick and easy
- ✓ budget-friendly
- ✓ patented system

COOL SPEED

Unternehmenszweig der Baustoff + Metall Gruppe

Unique: The B+M GP-Cool Speed cooling and heating ceiling system

Ceilings with integrated cooling and heating systems use radiant energy and therefore offer a cooling and heating system without dehumidification and draught. The ceilings evenly radiate heat or chill, so that a pleasant temperature and a comfortable environment are obtained.

What's NEW?

Profiles instead of complex installation planning with prefabricated registers:

Flexible installation is possible as profiles can be shortened and lengthened to your needs locally and therefore no production times have to be considered.

Endless pipes instead of connectors and fittings:

Due to on-site pipe laying no costly connectors and fittings are needed for the ceiling mounting and installation duration can be reduced.

The system convinces:

- ✓ robot-assisted pipe laying
- ✓ quick and easy
- ✓ budget-friendly
- ✓ patented system

Cool Racer 2.0

Precise and force-fitted press-in operation of pipes is done by the Cool Racer 2.0 (also for rent). More information can be found at: www.gpcoolspeed.com
